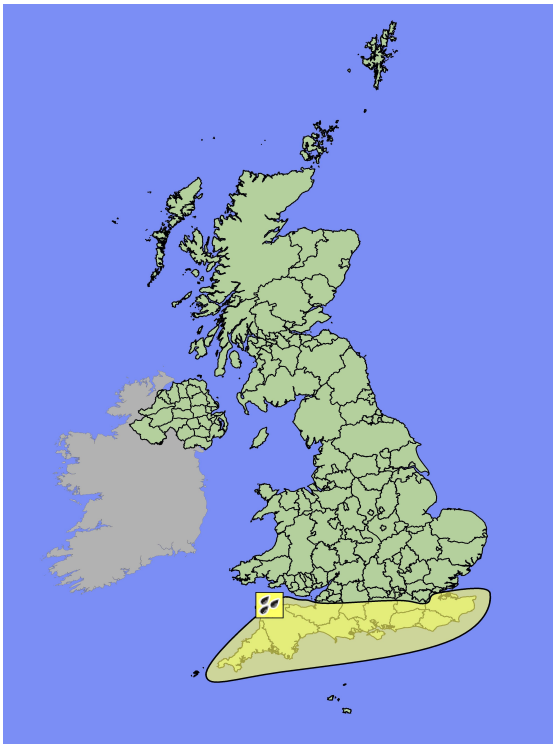
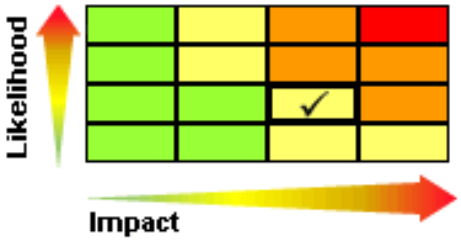
National Severe Weather Warning Service





Chief Forecasters Assessment
The depression currently affecting the UK is expected to be centred near or over southwestern UK by Wednesday bringing further showers and rain to many regions. There is a risk of further large rainfall totals accumulating across some regions, in particular over parts of the far south of England. Here there is potential for local accumulations of around 50mm. After recent wet weather, this further heavy rain could cause localised surface-water flooding.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:05 on Wed, 26th Sep 2012** until **23:59 on Wed, 26th Sep 2012**

Heavy and prolonged showers, accompanied by gusty winds, will affect parts of southern England on Wednesday.

The public should be aware that these heavy showers could cause localised flooding.
